Dear Hiring Manager,

I am writing to apply for the Backend Developer role at 433. I have followed football my whole life, not only as a fan who watches every big match, but also as someone who tracks live events on Sofascore and spends way too many hours playing FIFA and football fantasy leagues. Seeing a company that builds its technical platform around the same sport I care about made this role stand out to me right away.

Looking at your requirements, my background fits well. I have 4+ years of experience with C#/.NET and SQL Server, including work where I improved bulk-insert speed by about 45% through query tuning and better indexing. I also added Redis caching to the most-used pages of a high-traffic e-commerce platform, which cut page load time by about 50%. To catch problems early, I used Azure Application Insights for real-time monitoring, which helped the team fix issues about 40% faster. I have not worked with Umbraco directly, but I have built several CMS-based platforms with ASP.NET Core, so I can adapt to a new CMS quickly.

What I like about 433 is the mix of football and technology. Many companies talk about performance, but for you it is not abstract. During a big match, thousands of fans open the app at the same time, and the backend cannot slow down. That kind of pressure is exactly where I want to grow, building systems that stay reliable when it matters most. I also like that the team is close-knit, with short lines between product, content, and tech, since I prefer clear communication over long approval chains.

I am based in Eindhoven and open to relocating to Amsterdam or commuting for on-site work, so being in the office is not a problem for me. I would enjoy talking with you about how my experience with backend performance and SQL Server can support 433's platform. Thank you for your time, and I look forward to hearing from you.

Best regards,
Mo Behzadifard
