Eindhoven, Netherlands (Open to relocation)

Mohammad Hosein Behzadifard

About Me

.NET Backend Developer graduated with an M.Sc. from Politecnico di Milano, bringing 4+ years of hands-on experience in C#/.NET software development across professional roles and applied academic projects. Skilled in building RESTful APIs and clean, maintainable applications within Agile/Scrum teams, with practical experience using AI-assisted development tools to accelerate coding and improve delivery speed. Currently expanding into unit/integration and e2e testing, with a strong interest in high-traffic system design and query optimization, to strengthen backend capabilities. Available immediately, open to relocating to Amsterdam or commuting for on-site collaboration, no visa sponsorship required.

Skills

Programming: C#, Python, JavaScript, TypeScript, SQL

Frameworks and Libraries: ASP.NET Core, .Net Core MVC, .Net Core Razor Pages, .Net Framework MVC, Windows Forms, Jquery, Selenium

Tools & Technologies: Git, GitHub, TFS, Docker, Ubuntu Server, Windows Server, SQL Server, PostgreSQL, MongoDB, RESTful API, GitHub Actions, Azure DevOps, Azure Functions, Azure App Services, Kubernetes, Jira

Soft Skills: Knowledge sharing, Ownership, Adaptability, Stakeholder alignment

Languages

English (C1, IELTS), Dutch (A2, Currently learning), Persian (Native)

Education

- **Master of Computer Science And Engineering** 2022-2026

Politecnico di Milano, Milan, Italy

Selected for the Erasmus+ program in Leipzig, Germany.
Graduated with a **90/110**.

- **Bachelor of Computer Science And Software Engineering** 2017-2021

Zand University, Shiraz, Iran

Twice awarded for leadership in startup competitions.
Graduated with a high GPA of **18.72/20**.

Experience

Master Degree Thesis *Politecnico di Milano* 2025-2026

- Designed and implemented an end-to-end **MLOps pipeline** using **Kubernetes**, **Docker**, and **Kubeflow** for a Master's thesis project, integrating **Grafana** dashboards for monitoring, and **automating model deployment via CI/CD** to demonstrate scalable, reliable lifecycle management.

Backend Developer *Ably Software Company* 2018-2022

- **Maintained 99%+ uptime** across **Windows and Ubuntu** production servers **over 12 months**, via proactive monitoring and infrastructure management.
- **Cut deployment time by 60%** by building **CI/CD pipelines** with **Docker and Azure DevOps.**
- **Increased bulk-insert speed by ~45%** through **query tuning** and better **MSSQL indexing** for large data loads.
- **Cut data incidents by 40%** by defining **API contracts** and **MSSQL schemas** and delivering migrations with product, QA, engineering, frontend developers, and UI/UX designers in cross-functional Scrum environments.
- **Cut manual scaffolding time by ~55%** by building a custom **C# Windows Forms code-generation** tool for Repository/Service/Handler and Razor CRUD views.
- **Found and fixed problems ~40%** faster by using **Azure Application Insights** to monitor backend services in real time.
- **Reduced page load time by ~50%** by adding **Redis caching** to the most-used pages, making the app faster during **high traffic**.

Projects

Merchant Onboarding Platform (FinTech/POS):
Built a merchant onboarding platform using ASP.NET Core and SQL Server, integrating OCR to auto-populate forms, cutting manual entry time by 70% and increasing onboarding throughput by 2.5x.

Logistics & Fleet Tracking System:
Contributed to a GPS-based fleet tracking platform using C#/.NET Core and RESTful APIs, enabling reliable device communication between vehicle trackers and backend services, which improved monitoring of vehicle activity and reduced idle-time losses for hourly-paid drivers.

B2B Marketplace Systems:
Delivered ERP-style inventory and invoicing modules at scale for a marketplace serving 500+ seller listings using ASP.NET Core and PostgreSQL, automating stock updates and billing notifications to cut service ticket response time by 30%.

Ebola Response Coordination App (WHO Collaboration):
Built backend on Azure App Service and Azure Functions with Google Firestore, using AI-assisted coding tools to accelerate development, enabling doctors to submit field requests via a mobile app, with automated team assignment and real-time tracking.

Medical Tourism Super App (Startup MVP):
Built backend using ASP.NET Core and RESTful APIs integrating appointments, accommodation, airport logistics, and currency exchange for international patients.

Web Platforms and Web Applications:
Built multiple e-commerce sites, CMS platforms, and LMS systems using ASP.NET Core MVC/Razor Pages, focused on performance and multi-language support.

Professional Development

- Expanding testing skills through unit testing with xUnit, integration testing with Testcontainers, and end-to-end (e2e) testing for full-workflow validation.
