Eindhoven, Netherlands (Open to relocation)

Mohammad Hosein Behzadifard

About Me

.NET Developer with an M.Sc. from Politecnico di Milano, bringing over 3 years of professional C#/.NET experience complemented by additional academic project work. Experienced with Microsoft Azure and Azure DevOps CI/CD pipelines. Comfortable translating business requirements into technical solutions in Agile/Scrum teams, with practical experience using AI-assisted development tools to accelerate coding and improve delivery speed. Open to hybrid work and commuting to Utrecht, available immediately, and does not require visa sponsorship.

Skills

Programming: C#, SQL, JavaScript

Frameworks and Libraries: ASP.NET Core, ASP.NET Core API, .NET Core MVC, .NET Core Razor Pages, .NET Framework MVC

Tools & Technologies: Git, GitHub, Docker, SQL Server, RESTful APIs, Azure DevOps, Azure App Service, Azure Monitor, Redis caching, JWT, IIS, Nginx, Jenkins

Soft Skills: Knowledge sharing, Ownership, Adaptability, Stakeholder alignment

Languages

English (C1, IELTS), Dutch (A2, Currently learning), Persian (Native)

Education

- **Master of Computer Science And Engineering** 2022-2026

Politecnico di Milano, Milan, Italy

Selected for the Erasmus+ program in Leipzig, Germany.
Graduated with a **90/110**.

- **Bachelor of Computer Science And Software Engineering** 2017-2021

Zand University, Shiraz, Iran

Twice awarded for leadership in startup competitions.
Graduated with a high GPA of **18.72/20**.

Experience

Master Degree Thesis *Politecnico di Milano* 2025-2026

- Designed and implemented an end-to-end **MLOps pipeline** using **Kubernetes**, **Docker**, and **Kubeflow** for a Master's thesis project, **automating model deployment via CI/CD** to demonstrate scalable, reliable lifecycle management.

Backend Developer *Ably Software Company* 2018-2022

- Reduced **deployment time by 60%,** as measured by pipeline run duration, by building **CI/CD pipelines** with **Docker** and **Azure DevOps**.
- Reduced **data incidents by 40%,** as measured by fewer schema-related defects, by defining **API contracts** and **SQL Server schemas** across engineering, QA, and product teams.
- **Found and fixed** backend-service problems approximately **40%** faster, as measured by resolution time, by using **Azure Application Insights** for real-time monitoring.
- **Increased bulk-insert** speed by approximately **45%,** as measured by load duration, by tuning queries and improving **SQL Server** indexing for large data loads.
- **Reduced login-related** support tickets by **25%** as measured by ticket volume, by implementing **JWT** and cookie-based authentication with Google external login.
- **Increased test coverage to 85%** by writing backend code that passed pre-written unit tests from other developers following **TDD** practices.
- **Reduced application crashes by 30%** and improved API success rate to 99%, as measured by uptime metrics, by adding retry and timeout rules with **Polly** for database and external calls.
- Kept critical systems running with **99% uptime** during releases and high-traffic periods, by joining a **24/7 on-call rotation** and responding to high-priority incidents, including nights, weekends, and holidays.

Projects

Merchant Onboarding Platform (FinTech/POS):
In a merchant onboarding workflow requiring faster form completion, built ASP.NET Core services with OCR integration, reducing manual-entry time by 70% and increasing onboarding throughput by 2.5x.
Ebola Response Coordination App (WHO Collaboration):
In a field-response coordination effort, built backend services on Azure App Service, enabling doctors to submit requests and receive automated team assignment in real time.
Patient Health Records Platform, HealthTech Startup MVP:
In a healthtech MVP handling sensitive patient data, built the backend for a lifecycle patient-records system, unifying medical histories, procedures, and imaging in one platform.
B2B Marketplace Systems:
In a marketplace with 500+ seller listings needing faster service response, delivered ERP-style inventory and invoicing modules with ASP.NET Core and PostgreSQL, cutting service-ticket response time by 30%.
Logistics and Fleet Tracking System:
In a GPS fleet-tracking platform needing reliable device communication, contributed C#/.NET Core backend services via RESTful APIs, improving vehicle-activity monitoring and reducing idle-time losses.

Professional Development

- Expanding testing skills through unit testing with xUnit, integration testing with Testcontainers, and end-to-end (e2e) testing for full-workflow validation.
